## The Home Mold Formula

« In addition to their unpleasant appearance and musty odors, indoor molds in bathrooms or other damp places in the house, present risks to your health.

A few sprayings of a blend of oils with strong antifungal powers will allow you to control the presence of these fungi. »

**Ingredients :** Essential Oils of Cinnamon, Clove, Eucalyptus, Tea Tree.

**Presentation :** 10, 15, 20, 30, 50 and 100 ml glass bottles.

**Shelf Life :** needs to remain tightly closed and stored away from light and heat. Best if used within 3 years after the manufacturing date printed on the label.

### Instructions:

When you undertake to clean out the mold, it is advisable to wear a dust mask and gloves to prevent significant exposure to spores that will come out.

A **direct treatment** is indicated during a cleaning of these molds on your floors, sinks, showers, bathtubs, bathroom tiles, etc. It can be done by diluting the formula in a liquid soap that you use for your regular housecleaning (**5 ml** to add in 1 liter of soap), and, after cleaning and rinsing, by pouring a **few drops** of the concentrated formula directly on a damp sponge you use to treat infested areas.

For larger, or hard to reach, areas, such as walls and ceilings, it is possible to **vaporize this formula**. The dosage for making the spray solution is as follows:

- **30 drops** of the Home Mold Formula, to dilute in,
- **60 ml** (4 tbsp.) of alcohol, to dilute in,
- **2 liters** of water.

Be sure to follow each of those preparation steps, ensuring good dispersion of essential oils in your final blend. Agitate the container before each use. This spray can be used for light spraying in all the rooms, or localized spraying, focused on particular spots. After each treatment, it is essential to ventilate the rooms to ensure a proper drying of the sprayed or dampened areas.

## ***Frequency of use:***

The initial cleaning and treatment can be repeated weekly, and then, spaced further out, when the problem becomes more controlled. Know that the essential oils you spread have a lasting residual effect: they are active immediately, and for several weeks.

## ***Precautions:***

Concentrated or diluted product: do not ingest. Avoid contact with eyes and mucous membranes. Keep out of the reach of children.

## ***Tips about « sprays »:***

There are two ways to make sprays with essential oils. Read carefully.

***Sprays made with alcohol:*** the first step consists in thoroughly diluting the essential oils in pure alcohol, bought in pharmacy, or drugstore. The second step consists in adding this blend in the water contained in your vaporizer. Shake well. You do not have to use the vaporizer's content all at once. It can be stored, but you need to remember to shake the bottle before each use.

***Sprays made without alcohol:*** for single use only, you can prepare a spray with warm water, not boiling, in which you pour your essential oils. It is very important that you shake your container before and during use.

## ***Caution:***

Avoid spraying your preparation in the direction of another person or pet. Alcohol and certain essential oils are irritants.

Do not spray your essential oils towards a flame, especially if you used alcohol for their dilution.

Do not spray your essential oils on your food, or on pet food.

Avoid spraying water on wooden furniture, waxed, polished wood, etc. to avoid stains. If you often spray essential oils in your home, it is best to use distilled water or demineralized water, so as not to leave marks on your furniture, curtains, floors.
