## The Garden Mosses Formula

« There are ways to act naturally against the moss, mold, fungus, and mildew, which can invade your plants and walls.

Some spraying of oils with fungicidal powers will allow you to control these pests, and to see them ... disappear! »

**Ingredients :** Essential Oils of Cinnamon, Niaouli, Patchouli, Tea Tree.

**Presentation :** 10, 15, 20, 30, 50 and 100 ml glass bottles.

**Shelf Life :** needs to remain tightly closed and stored away from light and heat. Best if used within 3 years after the manufacturing date printed on the label.

### Instructions:

This concentrated formula is carefully crafted with essential oils from four plants with fungicidal powers. Substances contained in these oils were developed by plants to enable them to protect themselves from the pests that are mosses, fungi and mildew. By spraying the plants in your garden, you will give them this protection; and you will see these parasites disappear.

In spray only, using the following dosage:

- **15 drops** of the Mosses Formula, to dilute in,
- **60 ml** (4 tbsp.) of alcohol, to dilute in,
- **4 liters** of water.

Be sure to follow each of those preparation steps, ensuring good dispersion of essential oils in your final blend. Agitate the container frequently.

Spray on affected plants as well as on the plants you want to protect. It also can be sprayed on grass, walls, tree trunks, to treat or protect them.

### Frequency of use:

In case of infestation, start by spraying your plants once or twice a week, depending on how they are threatened by these parasites and space out according to the results you obtain.

For protection, spray once every two weeks.

This is a natural method, and depending on various factors such as rain, sun exposure, parasites' resistance, you may have to modify the frequency of use.

### ***Precautions:***

Concentrated or diluted product: do not ingest and avoid contact with eyes and mucous membranes. Keep out of the reach of children.

Wash fruits and vegetables before eating them, as usual.

### ***Tips about « sprays »:***

There are two ways to make sprays with essential oils. Read carefully.

***Sprays made with alcohol:*** the first step consists in thoroughly diluting the essential oils in pure alcohol, bought in pharmacy, or drugstore. The second step consists in adding this blend in the water contained in your vaporizer. Shake well. You do not have to use the vaporizer's content all at once. It can be stored, but you need to remember to shake the bottle before each use.

***Sprays made without alcohol:*** for single use only, you can prepare a spray with warm water, not boiling, in which you pour your essential oils. It is very important that you shake your container before and during use.

### ***Caution:***

Avoid spraying your preparation in the direction of another person or pet. Alcohol and certain essential oils are irritants.

Do not spray your essential oils towards a flame, especially if you used alcohol for their dilution.

Do not spray your essential oils on your food, or on pet food.

Avoid spraying water on wooden furniture, waxed, polished wood, etc. to avoid stains. If you often spray essential oils in your home, it is best to use distilled water or demineralized water, so as not to leave marks on your furniture, curtains, floors.
